EDUCATION

The Federal University of Technology, Niger — *B. Tech*
Mechanical Engineering
2014 - 2019

PROJECTS

Escrow Service Bot
This telegram bot service offers an automated escrow system able to facilitate a completely safe trade environment in which both the seller and buyer can make trades in different currencies. Here is the link https://t.me/escrowbbot

Autolina Vehicle Scraper
A python web scraping application to large vehicle data on a specific model from the https://m.autolina.ch website, exporting the information in an orderly format to a readable spreadsheet for the user to easily make better choices on search results. Also, it was built to bypass the security with the use of proxies and varying user agents per request.

Other python related project is on my Github – https://github.com/Pycomet

SKILLS

- Detailed Oriented
- Creative Problem Solving
- Testing & Debugging
- Object-Oriented Programming
